SUMMARY

Product Engineer with 12+ months of hands-on experience building live payment systems and FinTech products at scale. Built ReConn from scratch as the sole developer a reconciliation platform that went from concept to 100% adoption by internal teams on day 1. Architected and shipped a complete Visa dispute management system with full RDR flow in 7 days. Managed chargebacks across 3 card networks (Visa, Mastercard, RuPay), handling everything from dispute initiation through compliance reporting and resolution. Responsible for payment portal operations covering POS, MATM and AEPS touchpoints, plus managing Bharat Connect transaction operations. Strong technical foundation in Python, REST APIs, Playwright E2E testing, CI/CD pipelines, and system architecture. Published peer-reviewed researcher, hackathon finalist, and national competition winner.

EXPERIENCE

- iServeU Technology Pvt. Ltd.

Product Engineer

Mar 2026 – Present
- Prototyping:** Built 10+ rapid prototypes using vibe coding to validate product ideas and UX flows before full implementation, cutting feedback loops by 70% and reducing rework by 3–4 dev cycles per feature.
 - ReConn Platform:** Owned end-to-end. Built an interactive dashboard replacing raw API calls so non-technical teams could do reconciliation work. Shipped solo with 100% team adoption on day 1.
 - Visa Dispute Management:** 7-day build. Architected a complete dispute system with RDR flow covering the full lifecycle: initiation, evidence tracking, resolution, and compliance reporting across Visa, Mastercard, and RuPay.
 - Chargeback Operations:** Managed end-to-end chargebacks across 3 card networks, handling disputes, evidence tracking, resolution, and compliance. Maintained 99.8% uptime.
 - Portal Operations:** Real-time monitoring across POS, MATM, and AEPS. Managed 1,000+ daily transactions, incident response, and stakeholder communication.
 - Bharat Connect:** Owned transaction operations. Orchestrated workflows, validated transactions, and ensured processing integrity across 500+ daily transactions with zero critical failures.
 - QA and Testing:** Built functional, regression, and integration test suites. Created a Playwright E2E framework that reduced QA time by 60%. Used Postman to catch 40+ issues pre-production.
 - Defect Management:** Handled JIRA triage, maintained team alignment, and kept zero regression across dev, staging, and production. Maintained a 4-hour average resolution time.
 - Gift Card and Prepaid Products:** Building Gift Card, GPR, and Prepaid Card products. Managing issuance, load flows, API validation, and QA across networks.

- Heroic Apparel

Full Stack Developer

May 2024 – Feb 2025
- Built a complete e-commerce platform solo from the ground up. Designed a responsive frontend using HTML5, CSS3, and JavaScript. Built the Node.js backend with REST APIs. Managed a 200+ item product catalog, implemented shopping cart, checkout flow, and payment processing via PayPal and Stripe. The platform processed 500+ transactions with 98% uptime during launch.

- Svapak

Web Developer

Jun 2023 – Jul 2024
- Optimized web platform performance across multiple client products, achieving a 35% improvement in speed through optimization and caching strategies. Enhanced SEO rankings and cross-device compatibility across 5+ products. Streamlined content management workflows for the editorial team, reducing their overhead by 45%.

SKILLS

Product and Operations: Product Ownership, Requirements Gathering, User Research, UX Iteration, Agile/Scrum, Roadmapping, Defect Triage, Incident Management

Languages: Python, C++, JavaScript, TypeScript

Technical: REST APIs, System Architecture, Microservices, WebSocket, CI/CD, API Design

Tools and Platforms: Postman, Playwright, Git, Docker, CI/CD Pipelines, JIRA, GitHub

Frontend: React.js, HTML5, CSS3, Responsive Design

Backend: Node.js, Database Design

Testing and QA: E2E Automation, API Testing, Regression Testing, Integration Testing, Performance Testing

FinTech and Payments: Chargeback Management, RDR, Visa/Mastercard/RuPay, Bharat Connect/BBPS, POS, MATM, AEPS, Prepaid Cards

Databases: MySQL, MongoDB, PostgreSQL

PROJECTS

- ThunderBird: Quantum Secured Space Communication System

 - Published a peer-reviewed conference paper: “An Integrated Framework for Satellite Mission Management: Combining Real-Time Visualization, AI-Driven Analytics, and Security-Focused Operational Scenarios.” Built a quantum-secured satellite communication platform handling real-time data transmission across 10+ distributed nodes using Python, WebSocket, React.js, TypeScript, and Docker. Reached top 7 finalist out of 50+ teams in the Hack for Tomorrow hackathon.
- ID Card Generation and Tracking System for Indian Railways

 - Built a web-based employee ID card management system covering the full workflow from application submission through verification, approval, and issuance. Implemented role-based access control with 5 user roles, integrated QR code verification, and stored data in MongoDB with real-time status tracking. Successfully processed 2,000+ applications with 99.5% accuracy.

EDUCATION

IGIT Sarang

B.Tech Electronics and Telecommunication Engineering

Nov 2022 – 2026 | CGPA: 7.54

CHSE Odisha

Intermediate (PCM and Computer Science)

2021 | 83%

ACHIEVEMENTS

1st Place — Startup Odisha Competition | **1st Prize** — AI and Electronics Seminar, IGIT Sarang | **Top 7 Finalist** — Hack for Tomorrow (50+ teams) | **Published Researcher** — Peer-reviewed conference paper on satellite mission management
